

Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED SECURE ASSET SOLUTIONS

SERVICE CENTER REPAIRS

Experienced engineers and technicians on staff at our full-service, in-house repair center

*InstraView*SM REMOTE INSPECTION

Remotely inspect equipment before purchasing with our interactive website at www.instraview.com ↗

WE BUY USED EQUIPMENT

Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins. www.artisanng.com/WeBuyEquipment ↗

L'UNITE SEALED COMPRESSORS - INTRODUCTION

L'Unite Hermetique is 100% owned by Tecumseh, USA. Hermetic compressors are manufactured in Europe and marketed by Tecumseh Europe.

Where applicable all L'Unite compressors come complete with full electrics and rotalock valves included in cost. FH - TFH - TAG & *TAGD compressors come complete with crankcase heaters and oil level sight glasses. NB. A/C compressors may not have accessories attached.

Merits of TAGD

- capacity control according to the system demands
- reduced energy consumption due to low torque start and sequence starting
- reduced number of starts.

Terminology

LT (LBP)	Low Temperature - Evaporating Temp Range -40°C / -10°C
HT (HBP)	High Temperature - Evaporating Temp Range -15°C / +15°C
HT W (M/HBP)	High Temperature Wide Range - Evaporating Temp Range -25°C / +15°C
AC	Air Conditioning - Evaporating Temp Range -10°C / +10°C
S/F	Static Cooled/Fan Cooled
F	Fan Cooled
SOC	Static with oil cooler
CAP	Capillary Controlled
CAP/TEV	Capillary or Expansion Valve Controlled

For suitable compressor oils, please see Lubricants Section

M	Mineral Oil
AB	Alkylbenzene Oil
P	Polyolester Oil

Warranty: See Warranty section at front of catalogue for more details.

TECUMSEH EUROPE RATING CONDITIONS

Applications	Ambient	Evaporator outlet and return gas super heated	Condensing	Entering exp. valve
Low Temperature domestic and commercial refrigeration (LBP)	+32°C	+32°C	+54.5°C	+32°C
Other Applications (M/HBP-AC)	+35°C	11K	+54.5°C	+46,1°C

Visit www.tecumseh-europe.com for additional product information.

L'UNITE SEALED COMPRESSORS

Specified compressor heights are indicative of series dimensions. Certain model heights vary from specification. Please consult RE if the compressor height is crucial.

Features of the Tandem System

- Twin compressor configuration enable a more precise control of the system capacity to match the cooling demand and thereby the number of starts to a minimum to improve reliability.
- Capacity control - cycle one compressor off at low load conditions for power saving.
- Sequence start up of compressors reducing start up current.
- 50% redundant capacity in the event of one compressor failing.

APPLICATIONS FOR SOLID STATE RELAYS

ICG Series:	<ul style="list-style-type: none"> • One size for all compressors 1/12 through 1/2 HP. • Will replace most current relays. • Can be used with or without start capacitor.
PO Series:	<ul style="list-style-type: none"> • One size for all compressors 1/12 through 1/2 HP. • Replaces all push-on current type relays. • For use on compressors with "pin type" terminals. • Can be used on all capacitor and non-capacitor start motors. • Lowest resistance solid state relay. • Will restart a balanced system within one minute.
RO Series:	<ul style="list-style-type: none"> • Relay and overload in one combination unit. • Pre-wired for fast, simple installation. • Superior locked rotor protection eliminates start winding overheating. • Replaces all hermetic compressor relay and overload units 1/12 through 1/3 HP. • Can be used in conjunction with a start capacitor.
RSC Series:	<ul style="list-style-type: none"> • One size for all compressors 1/12 through 1/2 HP both domestic and commercial. • A combined solid state starting relay and capacitor. • Completely pre-wired. • Replaces current type relays. • Provides added boost for hard start and unbalanced systems. • Prevents low voltage starting problems. (No additional wires required.)
RCO Series:	<ul style="list-style-type: none"> • The 3 n' 1 Start Relay replaces all three electrical components, Relay, Overload, and Start Capacitor, on all capillary systems. • Completely pre-wired. • Installs quickly and easily, simply by pushing on 3 female pin terminals.

FRASCOLD SEMI SEALED COMPRESSORS - INTRODUCTION

Frascold History

The Fraschini Company was founded in 1936 to produce open drive compressors. Renamed Frascold in 1965, the company continued to develop its range of open drive compressors, adding a semi-hermetic reciprocating range by 1975. Since 1987 the factor production line has been continually upgraded with computer controlled machining processes, and this has enabled Frascold to increase production and maintain very high manufacturing standards. Quality control procedures conform to EN ISO 9001 standard.

Frascold's initiative and technology has led to the development of its low clearance high capacity design, where the piston head is shaped to suit the suction valve reed profile. This results in very low clearance, which is a major factor in improving performance and efficiency in respect to standard compressors.

The process of continual improvements has made Frascold a world leader as a manufacturer and supplier of semi-hermetic compressors throughout the world. Its modern, high performance range of semi-hermetic compressors is suitable for Refrigeration and Air Conditioning applications. Ranging from 3.93 cubic metres per hour through to 205.80 cubic metres per hour and with refrigeration capacities from 200 watts through to 280,000 watts, Frascold's semi-hermetic compressors are able to run on a large range of modern refrigerants.

Notes on the Frascold Range

Please note that the superheat of the suction vapour entering the compressor must not exceed the values stated by the manufacturer. Failure to adhere to this will void any warranty or performance claims.

Evaporating Range – Guideline Only

All compressors are suction vapour cooled. Refer to Compressor Data Book for individual operating ranges for above compressors.

H +10°C/0°C M 0°C/-15°C L -15°C/-30°C

See Warranty section at the front of catalogue for Warranty details

Single Phase: Protection with thermal Klixon.
 Three Phase: Inherent protection, thermistor with control relay.

All Frascold compressors are charged with Polyolester oils. Please refer to our Technical Department for refrigerant blend applications.

Our Technical Department is only too happy to select equipment and provide quotations for all your requirements.

Refer to Spares Section at the rear of this catalogue, for Frascold Compressor Spares.

SCREW COMPONENT INTRODUCTION

Frascold started manufacturing a range of twin screw compressors in 1995.

The twin screw compressor range comprises twenty four models across three ranges.

C-TSH Range: This range of compact twin screw compressors comprises eight models from a nominal 40HP to 120HP, with displacements from 120 to 360 cubic meters per hour at 50Hz. The C-TSH range is suited to applications in the operating temperature range from +12.5C to -15C SET on R22/ R407C/ R134A/ R404A. Compressors are fitted with integral oil separator / reservoir.

R-TSH Range: This range comprises eight models from nominal 40HP to 120HP, with displacements from 120 to 360 cubic meters per hour at 50Hz. The R-TSH range is suited to air conditioning and medium/ high temperature applications, in the temperature operating range from + 7.5C to - 20 C SET on R404A/R507A; +12.5C to -20C on R22; +20C to -10C on R134A.

R-TSL Range: This range comprises eight models from nominal 30HP to 100HP, with displacements from 120 to 360 cubic meters per hour at 50Hz. The R-TSL range is suited to low temperature applications, in the temperature operating range from -20C to -45C on R404A/ R507A.

OUTSTANDING FEATURES

Screw Profiles: The compressors are two-shaft rotary displacement design, with innovative profiles of the screws.

(Ratio 5:6 between male & female screw). The shafts are fitted with large roller bearings sized to bear both radial and axial loads, resulting in reduction of friction, vibration and lower noise levels. Discharge check valve, located in the service valve prevents counter rotation when compressor stops operating.

High Efficiency Electric Motor: High efficiency electric motor is two-pole, three phase asynchronous type. The rotor is fitted to the shaft of the male screw. Cooling of the motor is carried out by the suction gas flowing through slots in the rotor, also causing any liquid refrigerant to be separated due to the centrifugal action.

Power Supply: 400/3/50

Connection: Part Winding Start (PWS) 50% + 50% current distribution

Capacity Control: All compressors are fitted with capacity control, which operates by means of a three-way solenoid valve, directing the flow of oil under pressure, to a slide piston mechanism. At full load, oil under pressure pushes against the piston, opposing the spring and closing the capacity control device. At reduced load conditions, the oil is diverted to the suction side of the compressor, and the spring forces the piston to open the capacity control device, which reduces the displacement and consequently reduces the capacity of the compressor.

CAPACITY CONTROL STEPS

Model Number	% of full capacity – Steps
R-TSH8 40 120Y; R-TSL8 30 120Y	100 – 50; one stage capacity control
R-TSH8 50 150Y; R-TSL8 40 150Y	100 – 50; one stage capacity control
R-TSH8 60 186Y; R-TSL8 50 186 Y	100 – 50; one stage capacity control
R-TSH8 70 210Y; R-TSL8 60 210Y	100 – 50; one stage capacity control
R-TSH8 80 240Y; R-TSL8 70 240Y	100-75-50; two stage capacity control
R-TSH8 90 270Y; R-TSL8 80 270Y	100-75-50; two stage capacity control
R-TSH8 100 300Y; R-TSL8 90 300Y	100-75-50; two stage capacity control
R-TSH8 120 360Y; R-TSL8 100 360Y	100-75-50; two stage capacity control

Electronic Protection Device: All screw compressors are equipped with electronic protection called KRIWAN NT 68 FRY, complete with thermistor sensors, performing the following functions:

- Control of maximum temperature of the electric motor +120C, through six PTC thermistors, fitted to the stator winding.
- Control of the maximum discharge temperature +120C through PTC sensor placed on compressor discharge side.
- Control of rotation direction of the electric motor and phase sequence.
- Protection of phase and voltage failures.
- Control of breakage and short circuit in chain of PTC sensors.

Screw compressors can be installed in parallel configurations and the R series are well suited to two-stage systems.

Standard equipment

Screw compressor is supplied complete with:

- oil separator directly assembled with flange to the compressor body
- oil demister inside the separator
- oil strainer
- discharge connection complete with valve and check valve
- suction valve
- internal relief valve
- capacity control device
- electronic protection device
- electric box with IP65 protection
- oil heater
- vibration absorbers

Standard equipment

Standard equipment mounted on the compressor

- capacity control device
- integral electronic protection, includes:
 - sensor for maximum discharge temperature
 - sensor for maximum temperature of electric motor
 - electronic module
- suction valve
- discharge valve with check valve

Standard equipment supplied loose with compressor.

- vibration absorbers
- components for external oil piping, includes:
 - oil strainer with core
 - solenoid valve with coil and plug
 - oil flow switch
 - electronic module for oil flow switch
 - oil sight glass
